DETAILED ACTION

Response to Amendment

The rejection of claims 1, 3 and 5-7 under 35 U.S.C. 103(a) as being unpatentable over European Patent Publication No. 423995 is withdrawn in view of applicants arguments.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1, 3-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Buckmaster, 5,093,409.

Buckmaster teaches a fluorine containing polymer comprising tetrafluoroethylene, hexafluoropropylene and a perfluoroalkyl vinyl ether if desired, wherein the polymer chain terminals have been stabilized. The perfluoroalkyl vinyl ether is of the type contemplated by applicants in claims 9 and 10, and the polymerization takes place in the presence of an alkali metal/alkali earth metal, such as potassium per claims 7, 11 and 12. See column 4, line 15. As to the melt flow rate, it is the examiner's position that where the general conditions of a claim are known in the art, it is not inventive to discover the optimum or workable ranges by routine experimentation. Thus, the melt flow rate would have been obvious to choose during routine experimentation.

Art Unit: 1774

Therefore, the prior art teachings of Buckmaster would have rendered obvious the invention as claimed in the present claims.

No claims are allowed.
